EDUCATION

University of Texas at Austin

Austin, TX

Bachelor of Science in Computer Science, Minor in Statistics and Data Science

Expected May 2028

Relevant Coursework: Algorithms, Data Structures, Computer Architecture, Operating Systems, Discrete Math, Statistical Machine Learning, Linear Algebra, Neural Networks, Artificial Intelligence

Organizations: Longhorn Developers, Association for Computing Machinery, University Finance Association

TECHNICAL SKILLS

Languages: Python, Java, C, Swift, JavaScript, TypeScript, HTML/CSS, SQL, R, Terraform

Frameworks: React, AngularJS, Node.js

Developer Tools: Git, Linux, REST APIs, CI/CD Pipelines, Agile Development, Claude Code, Prompt Engineering

AWS Cloud: S3, Lambda, DynamoDB, RDS, Kinesis, Athena, Glue, SageMaker, Step Functions, API Gateway

EXPERIENCE

Ally Financial

Charlotte, NC

Software Engineering Intern

May 2026 – July 2026

- Developed a lightweight telemetry package for React web and iOS/Android apps to capture real-time user interaction data, driving product enhancements for 1000s of customers every day.
- Architected an AWS data pipeline (Kong, S3, Lambda, API Gateway, Snowflake, Terraform) to securely ingest and analyze 3,500+ telemetry events per minute from thousands of auto customers.
- Engineered secure backend routing with automated PII redaction filter for SSNs, phone numbers, account numbers to protect and process user data and generate personalized financial campaigns for Web, iOS, and Android.

State Farm

Richardson, TX

Information Security Intern

May 2025 – August 2025

- Developed multi-level executive review software using AWS (Lambda, DynamoDB, Kinesis, Terraform) to streamline enterprise security protocols for over 60,000 employees.
- Built front-end features for a critical internal web app using AngularJS, TypeScript, and HTML/CSS to optimize business operations and manage employee access in bulk.
- Wrote Python and Node.js scripts to generate custom datasets to analyze and report employee access patterns.
- First ever intern to receive the ‘Good Act Award’ from management for innovation and rapid adaptability.

AWS / Udacity

Remote

Machine Learning Program

April 2024 – August 2024

- Orchestrated serverless ML pipelines using AWS Step Functions, Lambda, and SageMaker, storing artifacts in S3.
- Preprocessed data and trained predictive models for bike-sharing demand using Python and AutoGluon.
- Trained Multi-layer Perceptron Neural Networks with PyTorch to classify 1000s of flowers at a 97% accuracy.
- Constructed a Convolutional Neural Network for landmark classification and packaged the model for deployment.

PROJECTS

Predictive Market Bots | *Python, Kalshi API, Raspberry Pi, Scikit Learn, Numpy, Pandas, Matplotlib*

- Deployed proprietary algorithmic trading bots for cryptocurrency, sports, and weather markets using arbitrage and straddle strategies, achieving an 87% Win Rate and a Profit Factor of 2.13.
- Used 24/7 scanning with parallel execution on a Raspberry Pi to reduce latency by 100x against sequential.
- Developed PnL tracking mechanisms to evaluate bot performance and refine and adjust high-frequency strategies continuously to maintain an edge in evolving dynamics using self-healing ML systems.

FinMe | *React, Supabase, PostgreSQL, Vercel, REST APIs, Edge Functions*

- Developed a company analysis platform utilizing REST APIs for automated financial data retrieval and reporting.
- Implemented a PostgreSQL backend and a queuing system capable of handling 1000s of requests a day by users.
- Designed a responsive frontend to model returns and perform risk analysis on any US-listed company.

Pintos | *C, Linux, Operating Systems, Assembly, Compilers, Interpreters*

- Expanded a base OS kernel by implementing priority scheduling, user system calls, and virtual memory.
- Upgraded a single-threaded file system into a multi-threaded, multi-level indexed architecture.
